

## Borrowing of NORAXON® EMG-Demo-Systems

Dear Sir/ Madam,

thank you very much for your interest in our EMG-systems. Within the framework of our customer service we are happy to offer you the possibility of borrowing a Noraxon EMG-system for free.

We would like to give you the best overview over our hard- and software as well as the options for diverse applications by giving you the chance to test our EMG-systems within your individual set-up and conditions. We would like to contribute to a sound and knowledgeable basis concerning your decision to buy a high quality EMG-system.

To carry out EMG-measurements with our Noraxon-measuring devices the following qualifications concerning hard and software are required: *Notebook not older than 2 years, 3-D-accelerated graphic-card, fire-wire-interface, PC-MC-IA-Slot. Windows XP Home or Professional.* If you need accessories like electrodes you can order them on the attached form. You will receive the material together with the delivery of the EMG-system.

Since we talk about expensive EMG-measurement devices please understand that we can offer this service only free of charge if we can assume your genuine interest in buying a system. You will be charged merely the cost for the shipment from Cologne to your institute (€ 30,00 within Germany, € 50,00 abroad) plus the return shipment which is under your coordination.

If you are interested to borrow an EMG-system please give us a call to make arrangements for the borrowing time. You will receive an order form which you are asked to sign and return per fax or postally. You will be sent a confirmation as well as the invoice for the shipment cost. As soon as we record the receipt of payment we will deliver the system to you.

We are looking forward to receive your request.

Best regards

Ingrid Konrad
